

**Important note:** When you edit this page, you agree to release your contribution into the [public domain](#). If you don't want this or can't do this because of license restrictions, please don't edit. This page is one of the [Public Domain Help Pages](#), which can be freely copied into fresh wiki installations and/or distributed with MediaWiki software; see [Help:Contents](#) for an overview of all pages. See [Help:Copying](#) for instructions.

This page explains the image syntax when editing the wiki. Before using images in your page, your wiki must have file uploads enabled (see the [technical manual](#) for details) and you have to [upload a file](#).

## Contents

- [1 Syntax](#)
- [2 Other files](#)

- [4 See also](#)
- [5 External Link](#)

Description	You type	You get
Embed image (with alt text)	<code>[[Image:Example.jpg Sunflowers]]</code>	
Link to description page	<code>[[ :Image:Example.jpg]]</code> <code>[[ :Image:Example.jpg Sunflowers]]</code>	<a href="#">Image:Example.jpg</a> <a href="#">Sunflowers</a>
Link directly to file	<code>[[Media:Example.jpg]]</code> <code>[[Media:Example.jpg Sunflowers]]</code>	<a href="#">Media:Example.jpg</a> <a href="#">Sunflowers</a>
Thumbnail (centered, 100 pixels wide, with caption)	<code>[[Image:Example.jpg center thumb 100px Sunflowers]]</code>	 Sunflowers
Border (100 pixels) Results in a very small gray border	<code>[[Image:Example-white-bg.jpg border 100px]]</code>	<a href="#">Image:Example-white-bg.jp</a>

<p>Frameless Like thumbnail, respect user preferences for image width but without border and no right float.</p>	<pre>[[Image:Example.jpg frameless]]</pre>	
--	--	--

## Syntax

The full syntax for displaying an image is:

```
[[Image:{name}|{options}]]
```

Where options can be zero or more of the following, separated by pipes:

- **thumb, thumbnail, frame, or frameless**: Controls how the image is formatted
- **left, right, center, none**: Controls the alignment of the image on the page
- **baseline, sub, super, top, text-top, middle, bottom, text-bottom**: Controls the vertical alignment of the image on the page
- **{width}px**: Resizes the image to the given width in pixels
- Special cases:
  - ◆ **page=1**: Displays the specified page when showing a djvu file
  - **link={destination}**: Allows to link to an arbitrary title, URL or just nowhere ([1.14+](#))
  - **alt={alternative text}**: For changing the alternative text (`alt=""`) of an image ([1.14+](#))

The options can be given in any order. If a given option does not match any of the other possibilities, it is assumed to be the caption text. Caption text can contain wiki links or other formatting.

## Other files

You can link to an external file using the same syntax used for linking to an external web page.

- `[http://url.for/some/image.png]`

Or with different text:

- `[http://url.for/some/image.png link text here]`

If it is enabled on your wiki (see [Manual:\\$wgAllowExternalImages](#)), you can also embed external images. To do that, simply insert the image's url:

- `http://url.for/some/image.png`

## Gallery of images

It's easy to make a gallery of **thumbnails only**, not other images, with the `<gallery>` tag. The syntax is:

```
<gallery>
Image:{filename}|{caption}
Image:{filename}|{caption}
{...}
</gallery>
```

Note that the image code is not enclosed in brackets when enclosed in gallery tags. Captions are optional, and may contain wiki links or other formatting.

for example:

```
<gallery>
Image:Example.jpg|Item 1
Image:Example.jpg|a link to [[Help:Contents]]
Image:Example.jpg
Image:Example.jpg
Image:Example.jpg|'italic caption'
Image:Example.jpg|on page "{{PAGENAME}}"
</gallery>
```

is formatted as:

Item 1                    a link to [Help:Contents](#)

*italic caption*            on page "Images"
